# TBEV (European subtype, strain Neudoerfl) Envelope protein E, His Tag (HPLC verified)

Catalog # ENE-T52H4

#### Synonym

TBEV Envelope protein E

### Source

TBEV (European subtype, strain Neudoerfl) Envelope protein E, His Tag(ENE-T52H4) is expressed from human 293 cells (HEK293). It contains AA Ser 281-Lys 675 (Accession # <u>P14336</u>).

## **Molecular Characterization**

Envelope protein E(Ser 281-Lys 675) P14336 Poly-his

This protein carries a polyhistidine tag at the C-terminus.

The protein has a calculated MW of 63.2 kDa. The protein migrates as 50-55 kDa when calibrated against <u>Star Ribbon Pre-stained Protein Marker</u> under reducing (R) condition (SDS-PAGE) due to glycosylation.

## Endotoxin

Less than 1.0 EU per  $\mu g$  by the LAL method.

## Purity

>90% as determined by SDS-PAGE.

>90% as determined by SEC-HPLC.

### Formulation

Lyophilized from 0.22  $\mu$ m filtered solution in PBS, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

#### Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

#### Storage

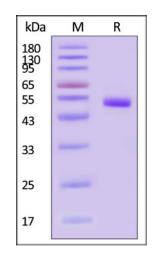

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

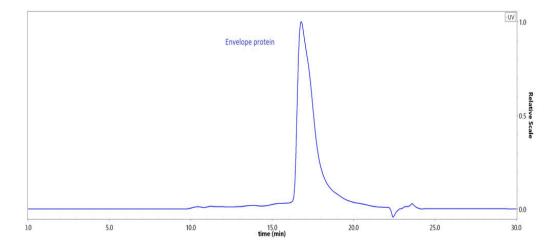

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

# **SDS-PAGE**

TBEV (European subtype, strain Neudoerfl) Envelope protein E, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90% (With <u>Star Ribbon Pre-</u>

# SEC-HPLC

The purity of TBEV (European subtype, strain Neudoerfl) Envelope protein E, His Tag (Cat. No. ENE-T52H4) was greater than 90% as determined by SEC-HPLC.

stained Protein Marker).

#### Catalog # ENE-T52H4

Immobilized TBEV (European subtype, strain Neudoerfl) Envelope protein E, His Tag (Cat. No. ENE-T52H4) at 1  $\mu$ g/mL (100  $\mu$ L/well) can bind Anti-Envelope protein E, Tick-borne encephalitis virus European subtype (strain Neudoerfl) antibody with a linear range of 0.001-0.125  $\mu$ g/mL (QC tested).

#### Background

Tick-borne encephalitis virus (TBEV), which belongs to Family Flaviviridae, is the leading cause of Tick-borne encephalitis in human and animals across Europe and East Asia. The infection of TBE virus will lead to the illness called Tick-borne encephalitis with high morbidity and mortality. TBE virus has three regional subtypes of European subtype (TBEV-Eu), Far-eastern subtype TBEV (TBEV-FE) and Siberian subtype (TBEV-Sib) that dominate their respective regions; however, the sequence variety at amino acid level is quite low and the European subtypes' vaccines show cross protection against other subtypes. The envelope protein E is the major viral surface antigen that plays an important role in viral infection, making it a great target for vaccine development.

### **Clinical and Translational Updates**
